technical and popular report.

Site-specific information was compiled for both historic and prehistoric sites from state agencies in Iowa, Minnesota and Wisconsin, and from various local and regional institutions. More than 1,000 historically or architecturally significant sites and districts and, more than 1,400 prehistoric archaeological components were recorded and plotted on base maps. From the site configurations and from other data collected during the course of the records and literature review, a narrative framework for the interpretation of historic and prehistoric sites was developed. Recommendations to enhance the management of the archaeological and historical data base were provided.

Thirty-two properties in the Pool 4 environs have been placed on the National Register of Historic Places. Among the 32, five are identified as Historic Districts: 1. Wabasha Commercial District; 2. Old Frontenac Historic District; 3. Red Wing Historic District; 4. Red Wing Residential Historic District; and 5. Alma Multiple Resource Historic District. One hundred and nineteen archaeological sites were identified.

INTRODUCTION:

Thirty-two properties in the Pool 4 environs have been placed on the National Register of Historic Places. Among the thirty-two, five are identified as Historic Districts: (1) Wabasha Commercial District; (2) Old Frontenac Historic District; (3) Red Wing Historic Mall District; (4) Red Wing Residential Historic District; and (5) Alma Multiple Resource Historic District. Individual inventories are provided for each district as well as inventories for more than 100 individual structures cited for historical and/or architectural importance. Figures 1 through 14 portray the locations of both district and individual structures listed in the tabulation.

One hundred and nineteen archaeological sites were identified through the archive and literature search. Inventory forms are completed for each site, insofar as existing information allows, and site locations are presented in Figures 15 through 28. Table 1 provides identification of known components at these 119 archaeological sites. It should be noted that site distributions are not based on comprehensive systematic survey and thus should not be used for predictive statements. Finally, sites categorized as ineligible unless specifically noted, means simply that they have not been evaluated in terms of National Register criteria.
